Scenario Example: Wei Qiang's LeetCode Accountability Journey

Context

(Persona details of Wei Qiang can be found in Iter1.1 Definition)

It's Monday morning, Week 8. Wei Qiang scrolling through LinkedIn during his morning coffee and sees another post about someone landing a Google offer. His stomach drops a little. He's got final-year project presentations in 6 weeks and interviews coming up in 3 months, but he only done 12 LeetCode problems. He knows he needs at least 100 to feel ready.

Opens his LeetCode profile. Sees the sad, patchy calendar with long gaps of inactivity. Closes it

immediately. "I'll start tomorrow," he tells himself. Again.

The Setup

Monday, 9:15 AM - Wei Qiang's phone buzzes. Jun Wei sent him a FoE app link on Telegram. Wei Qiang downloads the app and opens it.

He taps "Sign up with Google" and authenticates with his NTU email. The profile creation screen loads where he sets his username as "wqiang_codes", uploads his usual profile picture, and adds Jun Wei as friend (Jun Wei already sent him a friend request).

Jun Wei messages him: "Make a pact with me rn." Wei Qiang taps the "+" button at the bottom center of the screen.

The Pact Creation Screen appears. In the task field, he types "Leetcode Medium + Explanation" Then he taps the calendar icon for the deadline selector, selects "Today", and sets the time to "11:00 PM." As he wants the Pact to be a habit, he taps repeat daily and the app auto generates for him.

For the verification method, he scrolls through the options: "AI", "Friend Verification." He selects "Friend Verification" and continue to the friend selection page, and choose "Jun Wei". Next, he taps "Choose Consequence" and scrolls through the pre-defined list:

- The Public Apology
- Physical or mental tasks ← selects this one
- Singing cheesy pop songs

The review screen shows everything:

- **Task:** Complete 1 LeetCode Medium + explain approach in 50 words
- **Deadline:** Today, 11:00 PM
- **Verifier:** Jun Wei
- **Consequence:** Fitness Penalty (30 push-ups + 1-min plank) (to be sent to Jun Wei)

He taps "Seal Pact." Confirmation screen appears: "Pact created!" Jun Wei has been notified. Returns to home feed which now shows his active pact.

The Trigger (3:00 PM)

Afternoon lecture ends. Wei Qiang scrolling Reddit for 2 hours. Suddenly it's 5:30 PM and his phone buzzes.

FoE notification: "5.5 hours left on your pact - Jun Wei is watching"

He opens the app. The home feed shows Jun Wei's pact already completed with a green checkmark, posted 2 hours ago. His own pact displays with the countdown timer: **5:29:43... 5:29:42...** Below it reads: "Complete this or: 30 push-ups + 1 min plank (video)"

The deadline feels close now.

The Struggle (7:30 PM)

Wei Qiang has been reorganizing his browser bookmarks for the past hour. Classic procrastination. It's 7:30 PM now and he still hasn't opened LeetCode.

Jun Wei messaged on his pact in the app: "eh you started yet? □"

Wei Qiang checks the app again. Timer shows **3:30:00**. Can see Jun Wei viewed his pact 2 minutes ago. The consequence details staring at him. Finally opens LeetCode.

The Breakthrough (8:15 PM)

8:15 PM - He picks the "3Sum" problem and starts working.

8:45 PM - Stuck on the solution. Wants to give up. Opens FoE to check the timer: **2:15:00 remaining**. The ticking timer stresses him out but also helps. Has to figure this out in 2 hours. No "I'll do it tomorrow" option.

9:20 PM - Finally gets it. Two-pointer approach. Starts coding.

9:55 PM - Submission accepted ✅

Opens FoE app immediately and taps on his active pact. The "Submit Proof" button appears.

The submission screen opens. For the screenshot upload, he taps "Add Screenshot", selects his LeetCode accepted solution screenshot from gallery, and the preview shows a checkmark. In the written explanation field, he types: "Used two-pointer technique after sorting array. For each element, use left/right pointers to find triplets summing to zero. Key insight: skip duplicates to avoid repeated triplets. Time: $O(n^2)$, Space: O(1) excluding output." The word counter shows: **50/50 words ✓**.

He taps "Submit to Jun Wei." Confirmation appears: "Proof submitted! Waiting for Jun Wei's approval. Your deadline is safe as long as you submitted on time." Timer shows **10:02 PM**, submitted with 58 minutes to spare. He leans back, actually relieved.

The Resolution (Next Morning)

Tuesday, 8:30 AM - Wei Qiang wakes up to a FoE notification: "Jun Wei approved your pact ✓"

Opens the app. The home feed shows his completed pact with a green checkmark, moved to the "Completed" section. Jun Wei's comment reads: "Clean explanation bro, the skip duplicates part is clutch □". He taps on his profile icon at the bottom right. The profile screen displays his username "wqiang_codes" and a stats section showing:

- Current streak: 1 day
- Total pacts: 1
- Success rate: 100%
- Recent activity shows the completed pact

Feels good. Did what he said he'd do.

The Loop Continues (Tuesday Afternoon)

Tuesday, 3:00 PM - Between classes, feeling motivated. Opens FoE and taps the "+" button.

Creates a new pact with the same task, same deadline (11 PM), and same verifier (Jun Wei). But this time he ups the stakes. In the consequence selector, he selects "The Fitness Penalty" again, adds "The Blackout" (profile picture replaced with "Default Procrastinator" avatar for 24 hours), taps "Create Pact." Why increase stakes? Yesterday proved he could do it. Needs the pressure to stay sharp.

The pattern develops over the week. Wei Qiang making daily pacts. Jun Wei doing the same. Sometimes texting hints when stuck, sometimes trash-talking.

By Friday, his profile shows:

- 7-day streak
- Pacts completed: 9/10 (90% success rate)

He failed Wednesday's pact and had to record the push-up video. Jun Wei screen-recorded it and sent it to a group chat. Humiliating but also funny.

Why It's Working

Wei Qiang thinks about it one night. With just the LeetCode calendar, breaking a streak felt like nothing. Just a blank square. No one saw it.

But with FoE, it's different. Jun Wei sees if he fails. The consequences happen right now, not some abstract "you'll regret this in 3 months." He can look at his own success rate through his profile and the coins make it feel like a game.

The biggest thing? Can't negotiate with himself anymore. Monday morning when he made the pact, he was motivated and set fair terms. By 7:30 PM when tired and wanting to quit? Too late to back out. I already agreed it was fair.

No more "just one day won't matter." Every day matters when there's a timer counting down and a friend observing.
